

Figure 1. Global emissions and land use footprints of animal agriculture.

Total CO<sub>2</sub> equivalent emissions (A) assembled from species, product and country-specific production data from FAOSTAT for 2018 and species, product, region and greenhouse-gas specific emissions data from GLEAM (MacLeod et al., 2018), using CO<sub>2</sub> equivalents of 34 for CH<sub>4</sub> and 298 for N<sub>2</sub>O. Land use (B) assembled from species, product and country-specific production data from FAOSTAT for 2018 and species and product specific land use data from (Poore and Nemecek, 2018).
